SPECIFICATIONS

MATERIALS

STEEL STRUCTURE:

Built with thick gauges that make it solid enough to handle intense use. Steel structure has been extensively stress-tested for better duration and performance.

POLYPROPYLENE (PLASTIC PARTS):

High impact injection polypropylene. All plastic parts have textured surface and are inner ribbed for more resistance; all ergonomically designed for natural body support.

POLYURETHANE CUSHIONS:

Cold-molded foam with ergonomic design in several models, making complete padding for seats and backs (optional headrest in some styles).

AISLE END STANDARD COVER:

Rigid polyurethane available for decorative finishes, such as aisle ends and armrests.

PAINT:

Powder coating finish oven-baked at 200°C, applied with electrostatic method that allows stronger adherence.

FABRIC:

MARQUESA LANA:

100% Marquesa Lana (polyolefin) with fire retardant.

FAUX LEATHER:

PVC faux leather with fire retardant.

VELVETS:

Polyester velvets with fire retardant

NATURAL LEATHER:

Prime quality Natural Leather with fire retardant.

All meet requirements for California Technical Bulletin 117.

MECHANISMS

Rubber blocks last generation rocker system; noiseless, safe and long lasting. Patented automatic self-rising seat by gravity mechanism, silent and maintenance free. Our mechanisms are totally safe and built for frequent and intense use.

ADVANTAGES

Our Design and Development department is always looking for new featuring for all chair styles. Seating layout service at no charge. All parts are manufactured with prime quality raw materials. Flip up armrest allowing wider and more comfortable seating space. High quality plastic easy to clean and maintain. Mobiliario's production and administrative processes have been certified by ISO-9001-2008 quality system.

Plus Series

Designed to give better comfort under an innovative concept of ampleness and quality; luxurious traditional seat at lower cost, permitting more capacity, keeping row configuration and taking advantage of all available spacing.

The combination of upholstery materials and colors, using stitching that contrasts and gives continuity, harmonizes the general context of your auditorium.

The flip up armrests provide the continuity of seats and backs allowing the creating of warm and family friendly spaces, obtaining a real loveseat; on the opposite, using the arms in their down position, we get an individualized area without losing comfort.

The fully cushioned and upholstered center and aisle end standards, allow easy seating access to people physically challenged.

Rocker Series

Our Rocker mechanism allows us to obtain a seat with simultaneous motion in seat and back, performed by a soft body impulse, letting the seat have the best position for the body comfort.

Rocker series has the option of fixed or flip up armrests allowing us to be closer to our companion when the arm is in its upright position, since it comes with cushioned and upholstered center standard cover.

Swing Series

The swing mechanism offers us a seat with back only reclining motion with stationary seat bottom. This mechanism works with the body weight without making any effort.

Swing series has the option of fixed or flip up armrests allowing us to be closer to our companion, when the arm is in its upright position; since it comes with cushioned and upholstered center standard cover.

Fixed Series

We call a seat fixed, when the back has no motion, even if the seat bottom is self-rising. (Optional stationary seat). This type of seat is of lower cost, since it requires fewer accessories. Fixed series great variety of back styles offer options as pleats, tufts and lumbar support. It has the option of flip up or fixed arms. Fixed seats are very comfortable and highly resistant, since they are manufactured with same materials used in our luxurious seats.

RECLINING SERIES

The reclining concept is to make the user feel himself completely comfortable. This kind of seat is offered in two versions: electric and manual mechanisms. This seating series offers individual, love seat and continuous row configuration. Available with or without footrest.
